Information Systems Graduate

Chevron Australia's Information Systems (IS) team is a key enabler in the delivery of innovative and reliable applications, information and systems. The team is highly valued by functional project teams for its ability to maximise the benefit of their business processes.

What would I do?

In this role, you'll gain experience in areas such as business analysis, project management, technical computing, information/data management and application support.

You could be supporting high performance computing, managing and modelling data solutions, developing secure networks to prevent and detect intrusion, or consulting with function business areas to determine their IS requirements.

You will be given opportunities to stretch your technical breath in all aspects of the information systems domain by being involved with the execution of key IS deliverables to the wider business. By being involved in operational or project assignments you will learn skills outside of your profession which shall challenge the way you look at problems by working with cross-functional and diverse teams.

Who are we looking for?

Graduates with a Bachelor's, Master's or Doctorate degrees in computer science, GIS/ geomatics or information technology with geoscience. Graduates with a passion in information technology and a degree in petroleum engineering, geology, geophysics, mathematics or physics would also be ideal for this role.

This program is available to candidates who have recently graduated from, or have less than five years experience in the aforementioned disciplines.

How to Apply?

Applications are open from Monday 20 February and close on Monday 2 April 2012. To find out more information and to apply, please visit [www.chevronaustralia.com](http://www.chevronaustralia.com)

Please note that this program is only open to Australian and New Zealand citizens and Australian permanent residents.
