ICT Project Nomination Form 2012

The teams choose projects based on this short description. There is no guarantee that your project will be taken, make it sound as interesting and as educational as possible.

Project Title:
Cosmos Seligo apex fides – Cosmos Single point of truth

Client retains Intellectual Property: Unsure
Confidentiality Agreement required: Yes

Project Description:

Cosmos is a non profit community organisation which provides opportunities for people with an intellectual disability to participate in recreation, leisure and learning activities in community based settings, with the long term objectives developed to assist with personal goals and outcomes across a wide range of programs.

Cosmos is committed to providing programs which promote inclusion in the wider community and focus on enhancing the relationship between people with a disability and the wider community.

By 2013 Cosmos clients will access a unique, world class service that is innovative and flexible and promotes individual achievement made possible by our creative, diverse and talented team who are supported by quality systems.

Here’s where you come in, at the moment most of the collection of data that we do here at Cosmos is stored in word documents and spreadsheets stored on a central server. This method is cumbersome, out dated, uncoordinated and just doesn’t make good business sense.

We would like you to create a futuristic single point of truth data collection point.

The type of information we want to collect is based on three areas;

Our Clients
Our Staff &
Our Programs

From these databases we want to be able to create reports, gather profile information, create file notes, compile program information, as well as pulling information from any or all three areas to create meaningful information for our staff to enable them to fulfil their roles.
**Project Technical Information:**

We would like you to create a non local, web interface, real time, multi user program using cloud style computing. It needs to be upgradable, adaptable, and also have capabilities to have additions made to it into the future (possibly a rostering component). If possible it would be great if it could be integrated with other programs e.g. QuickBooks.
